Supervised Machine Learning: Regression and Classification
Microsoft Certified : Dynamics 365 Fundamentals
Fundamentals of Deep Learning

Rahma Ben jemaa

Data Engineer at OliveSoft
Tunisia

Summary

I’m a Data Engineer at OliveSoft and a Computer Engineering graduate, driven by curiosity and a passion for continuous learning.My current work focuses on Data Engineering, Data Integration, MuleSoft, API development, and Cloud technologies, where I’m building reliable solutions for enterprise environments.With a background in AI and Generative AI, I’m particularly interested in the intersection of Data, Integration, Cloud, and AI. My experience with IEEE, including international recognition and impactful projects, has strengthened my ability to collaborate, take initiative, and approach technology with a broader perspective.I’m always eager to learn, explore new technologies, and take on meaningful challenges.Open to collaboration, knowledge sharing, and new opportunities. Let’s connect!

Experience

OliveSoft
Data Engineer
September 2026 - Present (1 month)

OliveSoft
Intern AI & Data engineer
February 2026 - June 2026 (5 months)
Sfax

- – ()

Developed an end-to-end AI-driven platform for B2B prospecting and business opportunity matching, aimed at identifying relevant market signals and connecting them with suitable profiles or services.

:

- Designed and implemented a full data pipeline for collecting, cleaning, and normalizing heterogeneous data from multiple web sources.
- Built NLP-based processing modules for information extraction, entity recognition, and semantic analysis using embeddings.
- Developed a multi-dimensional scoring engine combining rule-based logic, machine learning signals, and LLM-based reasoning to ensure both performance and explainability.
- Designed an agent-based AI architecture with specialized agents for search, analysis, and generation, coordinated through a Human-in-the-Loop validation process.
- Implemented semantic matching using vector search and reranking techniques to improve relevance and accuracy of results.
- Orchestrated workflows using n8n to automate data processing and AI pipelines.
- Deployed the system on cloud infrastructure with a modular and scalable architecture.

DK Soft
Software Engineer Intern
June 2025 - August 2025 (3 months)
Tunisia

(/)
As part of my internship, I contributed to the development of the student extranet for the private faculty ITECH, working on both the front-end and back-end.

& :
▪ Designed and implemented an internal messaging system to streamline communication.
▪ Developed a customized chatbot to improve student support and interactivity.
▪ Built and integrated additional student-focused modules to enhance the userexperience.
▪ Contributed to the API layer and produced Swagger documentation for clear and standardized integration.

Ecole Nationale d'Ingénieurs de Sfax (ENIS)
Software Engineer Intern –Final Year Project (PFA)
December 2024 - April 2025 (5 months)

Developed a secure system for software activation key management to control access, duration, and validity of licensed software.

& :

▪ Designed and implemented a license key generator with unique activation logic for each user.
▪ Built a validation module to verify license status, duration, and usage rights before enabling software access.
▪ Created a management dashboard for administrators to generate, monitor, and revoke activation keys.
▪ Integrated encryption techniques to ensure the integrity and confidentiality of license data.
▪ Simulated real-world use cases of licensing in distributed software systems.
▪ Focused on security, reliability, and usability for both developers and end-users.

TEAMWILL
Intern
June 2024 - August 2024 (3 months)
Tunis, Gouvernorat Tunis, Tunisie

&
Built an intelligent system to automatically predict the professional category of resumes using Natural Language Processing (NLP) and Machine Learning techniques.

& :

▪ Designed and trained a classification model using algorithms like KNeighborsClassifier and OneVsRestClassifier on resume datasets.
▪ Preprocessed text data with regular expressions, TF-IDF vectorization, and NLTK for effective feature extraction.
▪ Implemented label encoding and managed model evaluation with accuracy scoring and optimization.
▪ Developed a Streamlit web app that allows users to upload resumes and get instant category predictions.
▪ Integrated file parsing, text cleaning, and model deployment using pickle, os, and re.
▪ Gained experience in data preprocessing, ML pipeline design, and AI-based application development.

▪ Addressed performance issues related to large datasets and adapted deployment strategies in cloud environments (Google Colab & Kaggle).

Education

Ecole Nationale d'Ingénieurs de Sfax (ENIS)

· (September 2023)

IPEIS - Institut Préparatoire aux Études d'Ingénieur de Sfax

Mathematics

école nationale d'ingénieurs de sfax

Master of Engineering
